INTRODUCTION

The foundation of the Stray Verse idea was in Aug 2021. Our team's initial aim for the Stray Verse idea was to make available to the globe a new age where they can virtually adopt a pet dog and enable it to breed, battle, race, solve mysteries, and achieve a variety of other experiences. Who doesn't want to be a part of a fresh online role-playing game with a large number of players servers where they may put their previous expertise and knowledge to good use, but with everything reset to its original state? However, as we put more time and effort into production and planning, we've discovered that there are a variety of issues that run through all of the NFT games, and we thought we might be able to help!

StrayVerse is a decentralised game universe in which anyone can earn tokens by competing or playing for fun.

The Dilemma

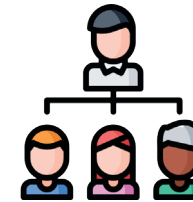

Pay To Win

The traditional massively multiplayer online role-playing game problem of veterans losing out to wealthier players with less skill would result in a rapid increase in the gap between the rich and the poor.

Overpopulated
Pets/Characters

Without a suitable balancing mechanism, overcrowding will almost certainly occur, and the value of lesser pets will eventually plummet, leaving little liquidity.

Absence of player
hierarchy

Multiplayer online battle arena (MOBA) games have been a tremendous success because they provide fun to players from all levels of the hierarchy. Players can match up with other players who have similar abilities.

PLAY TO WIN

1. Competing in Player Vs Player fights for prizes on the leaderboard.
2. Creating clones of Stray Verse and selling them on the market.
3. Rare Stray Verse such as Legendary and Inception are being collected and speculated on.
4. Investing in open-world land that can be used for virtual events.
5. Farming in order to obtain the in-game cash required to clone Stray Verse. On exchanges, these can be sold.

MISSION & VISION

Mission

To make the power of internet finance easy to understand and accessible to everyone. We believe that through gamification, we can push for easier and wider relinquishment of blockchain technology. Fueled by the internal passion of each and every game- nut in our platoon and the community, we want the world to know of the prodigies of gaming and how it can bring out the stylish of gaming and finance.

Vision

- Make blockchain gaming a fun and inspiring reality
- Enhance the technology of blockchain and gaming
- Produce a virtual world filled with vibrant community and art
- Accelerate the consummation of Universal Basic Income.

StrayVerse is organized as an open-finished advanced DOG universe. The StrayVerse center group will construct usefulness for the games resources globally. The DOG universe should be fun specifically else; exclusively by having a vivid gaming experience can the biological system draw in enough members to accumulate worth to the organization.

HOW IT WORKS ?

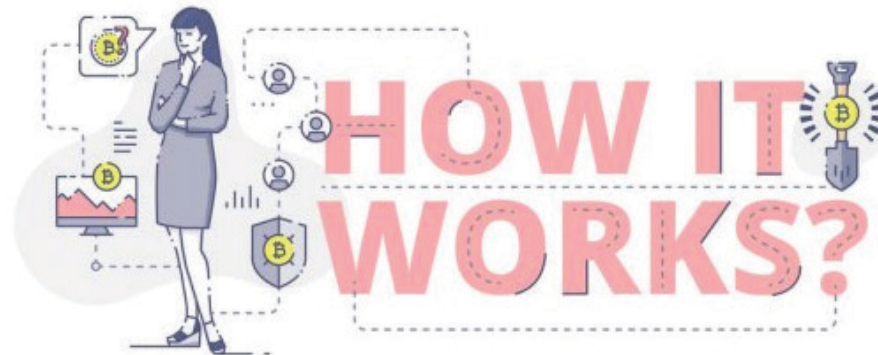

Collect

There is a basic method of collecting your first street DOG by just creating your successful gaming ID. Every user will get their first ever pet in its infantry form and basic skin.

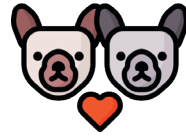

Utility

The game enables every user to take care of their pet as they do for their own real life pet. Users can feed, wash, change clothes, change skin, make pet sleep, train , exercise, battle, solve mystery and many more upcoming things in a real world.

BREEDING

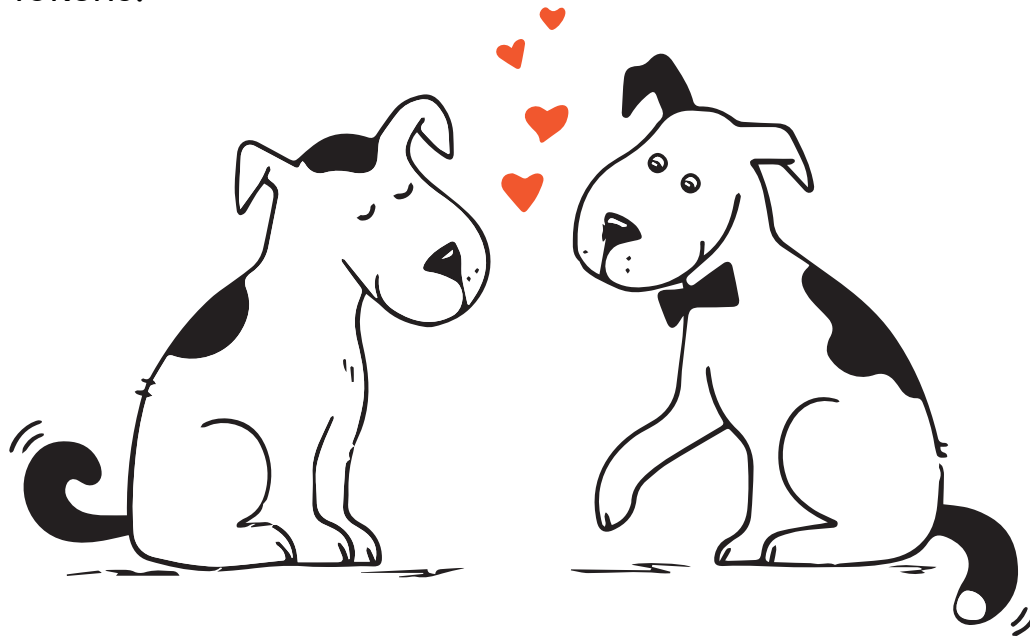

The game has its own unique NFT of two types viz. Male & Female version of Dogs. These NFT play a very important role in making this whole StrayVerse Community to grow further.

These NFTs will be bought through STV Tokens and users can breed their dogs eventually making a STV family. Combine any two pets will create a new pet that inherits its parent's genes.

Breed a pet you own with a sire that you own, or which you have previously been giving siring approval. It requires a pre-payment of the STV token fee given out to the first caller of Give Birth.

The new pet is assigned to the current owner of the matron. Upon successful completion, both the matron and the new pet will be ready to breed again. Note that anyone can call this function if they are willing to pay the gas! , but the new pet will always go to the mother's owner.

Each pet has certain evolution levels and capabilities depending on its rarity. Players can level up their pet by feeding them STV tokens.

CHARITY

The real aim of \$STV Token is to help street dog NGOs in every manner to benefit the dogs. A radium band will be given named STV to the NGOs so that they do not face any accident in the night.

ROAD MAP

2021

1

Creation of Socials and Website
Creation of community and organic growth
Twitter and Telegram
Marketing campaign
Shilling contest
Meme contest & much more
Referral contest
Foundation Wallet Lock
Private sale
Presale and liquidity lock (automated by DxSale)
PCS Launch

2022

2

Listing on Coingecko
Listing on CoinMarketCap
BSD Center Development
Burn
Start of retail investor based marketing

2022

3

Event: NFT launch
STV Center Pre-release
Micro gaming events
STV Center launch

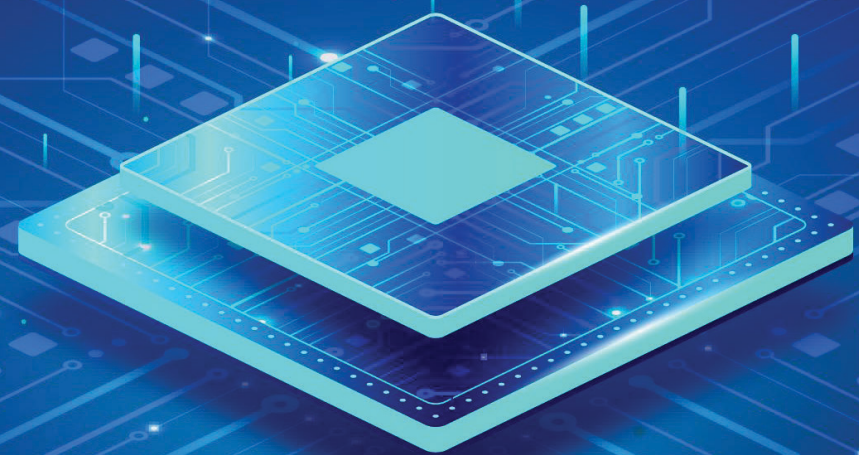

TECHNOLOGY

We're enforcing a Binance Smart Chain service with **Virtual Machine** capabilities and interoperability with Binance Smart Chain. This will allow players to save and modernize their in- game means including their Slapdash Verse without paying a figure at every step.

Network Enterprises

There are some enterprises over the long- term food of external systems which may affect the stability of the game ecosystem. Lately, we've seen some directorial insecurity with the Loom network platoon during the epidemic, which has reminded us yet again of the possibility of the network swinging from the expedients of its druggies and potentially leading to scalability issues. Launching our own sidechain seems to be most charming for us at the moment, and plans are underway.

Community Support

As gamers ourselves, we understand the struggle of having no backing from the inventors when one faces difficulties with the game or their account. Hence, the establishment of 24/7 game support is on one of our precedence lists. We admit that a crazy cargo of scores might come on, but we value the community further than anything. There are challenges ahead that bear careful planning and making a lot of opinions. While seeking to look for a long-term result and importing on each possibility, we look forward to contributing to delivering further community-driven platforms for NFT gaming in the request!
